

Do your business not your network

Network is the most critical part of the IT infrastructure because core business processes depend on its functionality. We clearly understand this dependence and developed managed network services that will lead network infrastructure to reliability and effectiveness. Our network operation center administrators will proactively monitor and manage customer networks to minimize downtimes and ensure that all issues are resolved in time.

Service advantages

- ✓ **Reliability** - With a MN™ SLA, your network infrastructure is managed 24/7.
- ✓ **Security** - Services delivered using most secured protocols.
- ✓ **Confidentiality** - Customers information protected with nondisclosure contract.
- ✓ **Competence** - Service engineers are certified professionals in different areas of IT.
- ✓ **Reduced Cost** - With MN™ model consumer pays only for what he uses.

Supported vendors

- ✓ **Cisco Systems**
Cisco offers a comprehensive, future-proofed solution that minimizes network outages and ensures access to the most business-critical applications. Cisco's focus on integrating new infrastructure services with performance enables companies to create networks that are more intelligent, resilient, and reliable. For organizations of all sizes that need fast, secure access to today's mission-critical applications as well as a foundation for future growth.
- ✓ **HP/3Com**
The combined product portfolio of ProCurve, 3Com, H3C and TippingPoint expands HP's networking capabilities and accelerates the Converged Infrastructure strategy. HP delivers innovative networking solutions to help organizations improve their time-to-value, operational excellence, and ability to leverage networking technologies.
- ✓ **D-Link**
The "Building Networks for People" tagline is based on the idea and mission to make technology affordable for the mass market consumer and small to medium business so that everyone can realize the benefits of technology. The company founders strive to empower consumers and businesses to share files, data and access, but more importantly...ideas.
- ✓ **Linksys**
Linksys provides voice over Internet protocol, wireless, and Ethernet networking solutions for home, small office, home office, and small business users internationally.
- ✓ **Mikrotik**
MikroTik was founded in 1995 to develop routers and wireless ISP systems. MikroTik now provides wireless ISP systems for Internet connectivity in most of the countries around the world.

Supported devices

- Routers
- Switches
- Wireless
- VoIP / UC
- Optical Networking

Service plans

When it comes to network infrastructure, it is practically impossible to develop universal service plans. We always prefer to learn more about customer infrastructure and provide with dedicate offer.
